1. INTRODUCTION

The Shire of Broomehill-Tambellup manages an extensive network of local roads that are vital to supporting the region's agricultural economy, connecting communities, and ensuring safe and efficient transport across the region. To maintain and develop this network effectively, a clear and structured road hierarchy is essential.

The Road Hierarchy outlines the classification of roads within the Shire according to their function, usage, and strategic importance. It provides a framework for consistent planning, design, maintenance, and investment decisions, ensuring that each road fulfils its intended role within the broader transport network. By adopting a functional road hierarchy, the Shire is better positioned to prioritise works, manage road safety, and respond to changing transport needs. This approach also supports collaboration with regional partners and state agencies by aligning local road management with broader transport objectives.

This document is intended to guide internal decision-making and inform future infrastructure planning and funding submissions.

2. OBJECTIVES

The intent of the road hierarchy is to provide minimum standards for construction and maintenance of roads within the Shire and to prioritise accordingly. The standards of maintenance and construction will represent the adopted Levels of Service for each road within the Shire.

The primary objectives are to:

- Provide a safe, efficient and effective road system for the Shire;
- Set and define minimum standards for construction and maintenance, and provide scope to systematically shift towards best practice road design; and
- Provide a rational and consistent basis for the construction of roads and any financial contributions required for such construction.

3. ROAD HIERARCHY CLASSIFICATIONS

An essential component of the Road Hierarchy is the establishment of a clear classification system for all roads within the Shire. This system serves as a guideline for categorising roads based on their function and role within the overall network.

The primary purpose of this classification is to define minimum standards for construction and maintenance, ensuring that each road is managed in accordance with its use and importance. Classifications within the Road Hierarchy Framework are determined by factors such as road formation, intended purpose, traffic capacity, and the road's significance in the broader transport network.

The Shire of Broomehill-Tambellup Road Hierarchy consists of six category types:

- Regional Distributor
- Local Distributor of Regional Significance – linking regional transport routes
- Local Distributor – linking Local Distributor of Regional Significance to Access 1 and 2 roads
- Access 1 - low volume local road
- Access 2 - low volume, predominantly farm access road

- Town streets

4. ROAD CLASSIFICATION TABLE

REGIONAL DISTRIBUTOR	LOCAL DISTRIBUTOR		ACCESS ROAD

5. ROAD HIERARCHY PRIORITY FOR CONSTRUCTION AND MAINTENANCE

The capacity of the Shire to upgrade and maintain roads varies from year to year. Capital works are significantly funded through grants, which in some cases constrain where funds can be spent.

Safety infrastructure is considered in all upgrades and maintenance of roads and as such the Shire is working to systematically upgrade roads to improve safety performance based on budget, capacity and environmental factors.

Due to the same plant and human resources being used to complete construction and maintenance works, the capacity to complete maintenance works is dependent on the size of the capital works program. In addition, poor weather can impact both the capital and maintenance programs. Within the context of these constraints when allocating maintenance tasks (these priorities will also be used for prioritising emergency response), equivalent road needs or equivalent road risks should be prioritised in accordance with the following table, where budget or other resource constraints (including those resulting from weather) prevent the Shire from achieving the minimum level of service.

Priority	Road Classification
1	Regional Distributor / Local Distributor of Regional Significance
2	Local Distributor
3	Access 1
4	Access 2
5	Town Streets

6. CONSTRUCTION STANDARDS

The Shire applies consistent construction standards to ensure its road network is safe, fit for purpose, and sustainable. These standards align with the road classification system and reflect the intended function and use of each road. For detailed specifications and minimum requirements, refer to *Shire of Broomehill-Tambellup Policy 3.1 Road Construction and Minimum Standards*.

Regional Distributor	
Gravel Formation Width	Minimum 10m
Sealed Running Surface Width	Minimum 7m
Lane Width	Minimum 3.5m
Shoulders	Minimum 1.5m
Road Reserve Width	Minimum 20m

Local Distributor of Regional Significance	
Gravel Formation Width	Minimum 10m
Sealed Running Surface Width	Minimum 7m
Lane Width	Minimum 3.5m
Shoulders	Minimum 1.5m
Road Reserve Width	Minimum 20m

Local Distributor	
Gravel Formation Width	Minimum 10m
Running Surface Width	Minimum 7m
Shoulders	Minimum 1.5m
Road Reserve Width	Minimum 20m

Access 1	
Gravel Formation Width	Minimum 8m
Paved Running Surface Width	Minimum 7m
Shoulders	Minimum 0.5m
Road Reserve Width	Minimum 20m

Access 2	
Gravel Formation Width	Minimum 6m
Road Reserve Width	Minimum 20m

Town Streets - Town Access Streets	
Paved Running Surface Width	Minimum 7.2m
Road Reserve Width	Minimum 20m
Cul-de-sac Width	Minimum 18m
T-Turning Heads	Not permitted
Concrete/Asphalt Footpath	At least one side of the road to connect existing footpaths where possible.

Town Streets - Industrial, Commercial and Thoroughfares	
Paved Running Surface Width	Minimum 7.2m
Road Reserve Width	Minimum 20m
Unsealed Footpath	On both sides of the road to connect existing footpaths where possible.

Town Streets - Rural Residential	
Paved Running Surface Width	Minimum 7.2m
Road Reserve Width	Minimum 20m
Unsealed Footpath	On one side of the road to connect existing footpaths where possible.

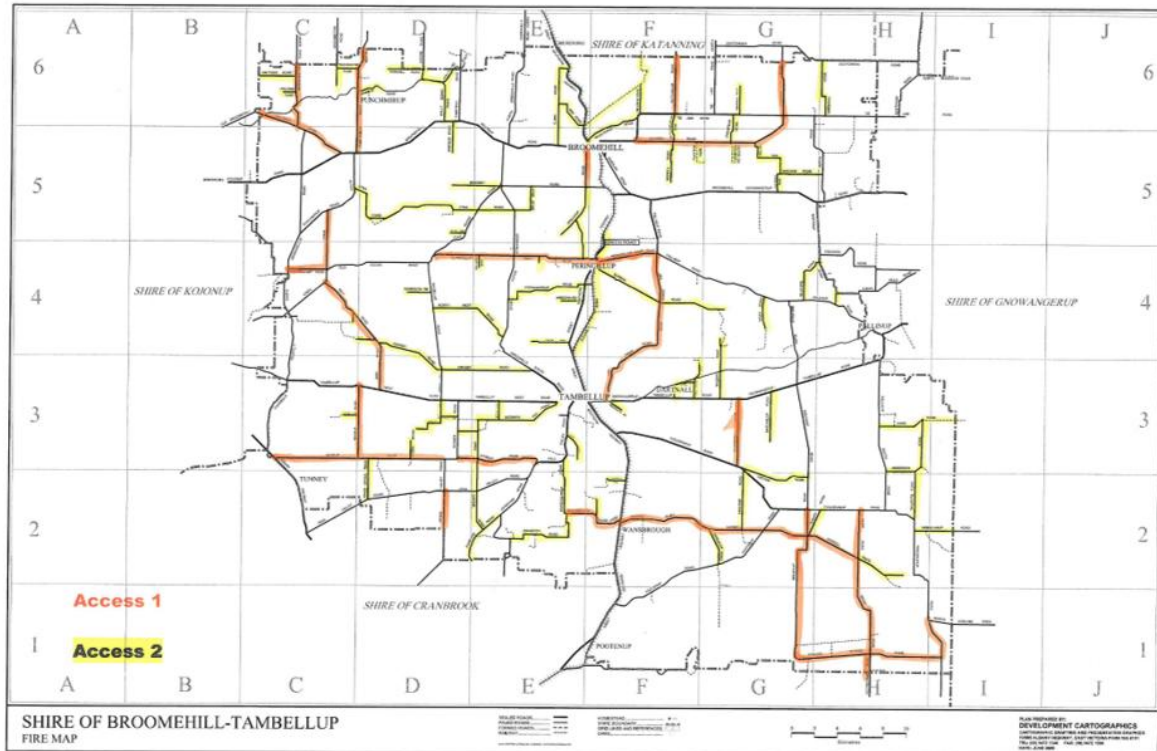

The Shire of Broomehill-Tambellup recognises the Main Roads Standards 501 Pavements Specifications for road construction.

7. ROAD HEIRARCHY LEVELS OF SERVICE

The level of service for roads, at its most basic, is reflected in the speed and weight ratings across the road network. As a measure, the lengths of sealed and unsealed road for each speed and weight rating is viewed as the most appropriate indicator of the level of service of the road network and will continue to be monitored into the future. Level of service for the road network is defined in the *Shire of Broomehill-Tambellup Strategic Resource Plan 2019-2034*.

Levels of Service	
Detailed AI Enhanced Inspection	Minimum bi-annual data capture
Road Serviceability Inspection	Minimum 2 per year
Road Re-sealing	Every 15-20 years
Shoulder Grading	Periodic shoulder grading to be included in the annual road program. Grading requirement is triggered when edge drop-off reaches 30mm, and prior to drop-off reaching 60mm.
Reported Maintenance Issues	Repaired within 2 working days of notification.
Reported Hazards	Hazard removed within 2 hours of notification.
Roadside Vegetation	Grasses and vegetation within the maintenance corridor to be monitored and maintained as part of the annual road program.
